FBMaxed To Deliver You To The Promised Land in Facebook?

With the advent of iFrames and the HTML5 framework, the door to new adventures and possibilities with these tools in the making of your Facebook Page has reached an entirely new level. You can now create an entire website on your own Facebook Page. I'm talking complete web sites with multiple pages, with videos, photo galleries, opt-ins, sales pages, landing pages, links, whatever it is that you can do with a web site, you can do it here on Facebook. Wow, interaction with your fan base on Facebook has never been this exciting!

With all these new features and tools available, it is indeed timely and spot on for a complete system that streamlines the whole process of creating and implementing a website on your Facebook Page, to make its grand entrance.

Enter [FBMaxed](#).

This is by far the only Facebook Page system that I know of that utilizes both the iFrames and the dynamic HTML5 framework together. Yes, [FBMaxed](#) makes sure that you stay ahead of the curve and even declares that it will future proof your Facebook Page by virtue of its customizable templates. They even double as mobile websites and have been tested on Android, Blackberry, iPhone and iPad!

One thing that really stands out is that this system essentially allows you to custom create two web sites for your Facebook Page. Why two? One is a reveal splash page, meant to be seen by people who have not "liked" your page, while the other is a real, complete web site that is visible only to those that have "liked" your page. As for the reveal splash page, it is, get this, an entire web site by itself. It's not just a single page with an image and some text; it's a complete web site where you can include anything you want into it such as videos, lead capture opt-ins, photo galleries, and more! Talk about creating a teaser site to get people to "like" your Facebook Page, so they can get to see the real, complete thing!

I was also very impressed with the three solid customizable templates that comes with [FBMaxed](#). It essentially takes care of all the grunt work in designing and implementing a website on your Facebook Page. What are just some of the things that these templates can do? Opt-ins, PHP email contact forms, HTML5 video, photo galleries... wow, just wow. I'm really tempted to ask here now, is there something that [FBMaxed](#) can't do?

The icing on the cake, however, is the excellent value-added services that the [FBMaxed](#) team is offering to its buyers. They will hold webinars every few days to guide them through the setting up of their very own facebook Page. After every webinar they will hold a question and answer session where people are given a chance to clarify any doubts or uncertainties. These webinars are also posted as downloadable videos so buyers can revisit them anytime they want to, in case they missed out on a webinar or just want to revisit certain topics. And of course, they also have email support to answer your questions and concerns.

All in all, if you are into social media marketing and want to dominate the market and competition, or want to spread brand awareness and keep in constant touch with your fan base on facebook, then [FBMaxed](#) is definitely a must.
